Cast films trend and current technological challenges.

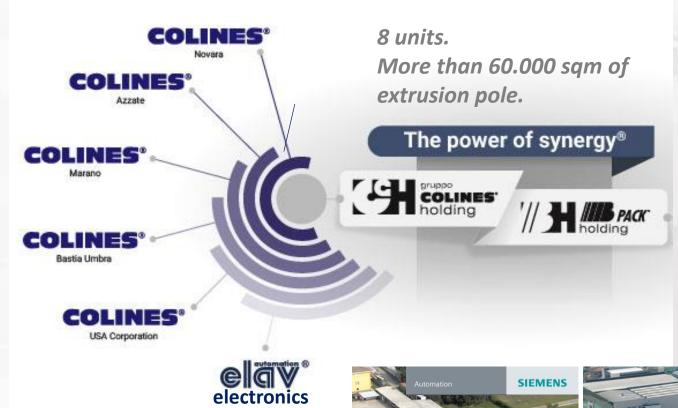

Use of Flexible Packaging in a Modern Era

CONVENTIONAL LAMINATES 3-ply

- <u>Printed layer</u>: BOPP/BOPET film; ink reverse printed
- Adhesive
- Eventual Barrier (if required):
 MET BOPET/Alu foil
- Adhesive
- <u>Sealing layer</u>: CPP, PE

MODERN LAMINATES 2-ply

- <u>Printed layer</u>: MOPP/BOPP; Metallized or AlOx for reverse printing
- Adhesive
- Sealing layer: CPP, PE

Deep Know-how on: Raw materials, Formulations, Market demand and Final applications

- Recyclable solutions
 POD lines
- Lower production costs
 iR technology
- Product enhancement
 MDO units
- Process enhancement
 Touch-less operations
- Analisys enhancement
 Live software

Properties of Cast PP/PE films

- High Sealablility and transparency
- High clarity and gloss
- High moisture barrier
- Excellent flatness
- Superior resistance to tears and punctures.
- Resistance to grease and oil
- Good anchoring of inks and adhesive to Treated Surface.

Main applications CPP/CPE; MOPP/MOPE

- Lamination CPP Films
- Metallized CPP Films
- CPP Bag Films
- Bread Packing Film
- Anti-Fog Films
- High Gloss Printing Films
- Lidding Films

- Retort Films
- Medical Films
- Deep Freeze Films
- Thermoforming Films
- Twist Films
- Stationery Films
- Textile Packing Films

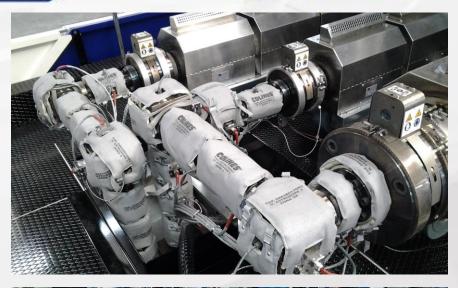

Extruders

Designed to perform

- LGS® Screws with high wear resistant surfaces design optmized for PP and PE resins
- Specially designed feed-zones
- Working range MFI 0.8 12
- Different filtering options
- Advanced techniques for Energy Efficiency

Extruders

Infrared heating system

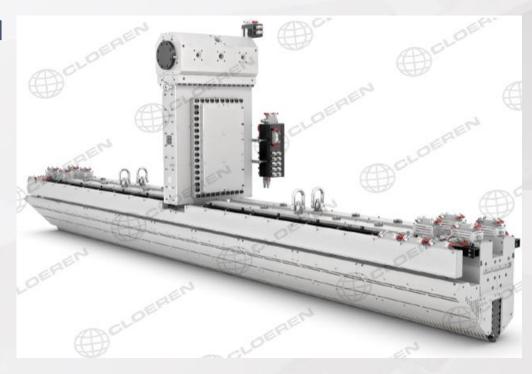

- 30% flat saving over traditional technology (contact heaters ceramic/iron)
- Providing visible gain in screw torque and mass flow generated by the extruders (lower specific energy applied).
- Simplified and engineered application for rapid tube servicing.
- Economic and reliable solution.
- Proprietary software developed.

Mastermind touch less operations Featuring REFLEX die

- Mastermind is a proprietary system developed by COLINES
- Auto calibration and mapping throughout electronic management of die bolts
- Automatic settings of m/c parameters
- Automatic die deckling for fast width change
- Faster lip adjustment response
- Reduction in product waste

AUTOMATION PACKAGE FOR TOUCHLESS LINE CONTROL

- Contributing to optimize line uptime.
- APC Automatic Profile Control (proprietary technology).
- Based on Siemens SIPLUS HSC4200 technology
- Management by Central Interface Unit, Profinet interfaced.
- Power output modules complete with heaters break detention.

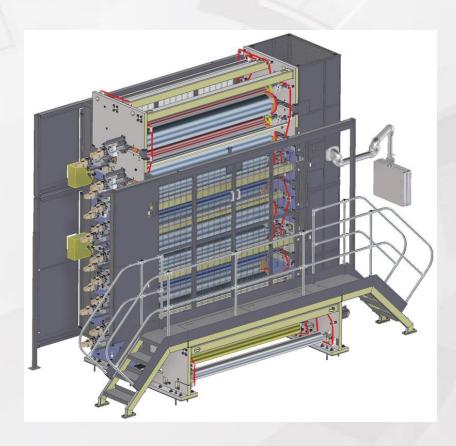

Big Mouth® cold trims re-feeding Proprietary system (200+ installations globally)

- Provide ideal pre-mixing and air extraction.
- Result in a homogenous and compact stream.
- Natural pressure consistency results in a perfect longitudinal thickness tolerance.
- 4.5 kW/h consumption at max output.
- Avoid use of melt pump for pressure stability
- Permits different trims employement in modern film structures, as follows:

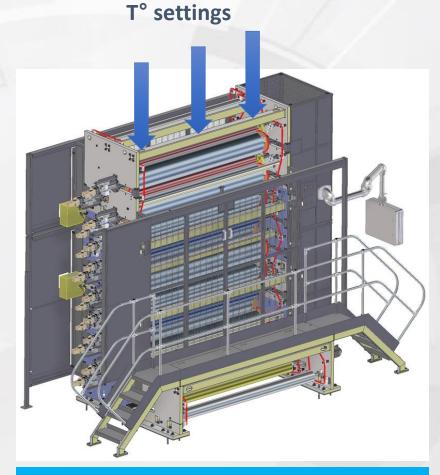

- MDO Film orientation in Machine Direction
- Supplying MDO unit from 1980
- New technology (PATENTED)
- Modular design
- Production of;
 - MOPP
 - MOPE

- iR heating > segments set-up, limited neck in
- Very low energy consumption (0.1÷0.2 kW/kg)
- No heating thermoregulation units required > less space
- No oil leakling > cleaner production room

100 mm neck-in (iR technology)
250 mm on standard MDO (oil)

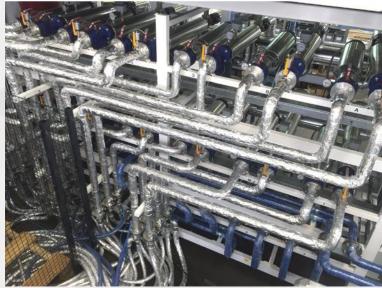

- iR heating > segments set-up, limited neck in
- Very low energy consumption (0.1÷0.2 kW/kg)
- No heating thermoregulation units required > less space
- No oil leakling > cleaner production room

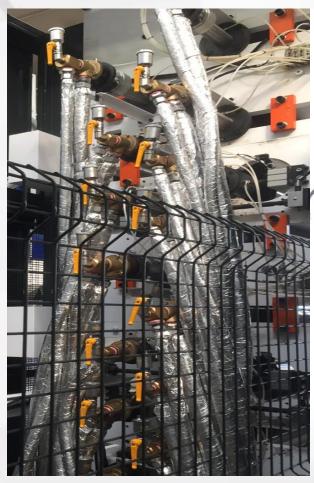

- iR heating > segments set-up, limited neck in
- Very low energy consumption (0.1÷0.2 kW/kg)
- No heating thermoregulation units required
 > less space
- No oil leakling > cleaner production room

- iR heating > segments set-up, limited neck in
- Very low energy consumption (0.1÷0.2 kW/kg)
- No heating thermoregulation units required > less space
- No oil leakling > cleaner production room

Conventional oil system

Modern iR system

Winding

Modern Engineering

- Turret system up to 6000 mm wide
- Independent rotary arms execution up to 3600 mm
- Possibility to wind-up by gap or contact
- Electro-mechanic contact unit
- In-line slitting at maximum speed
- Most precise tension control up to 1200 mm OD

Reel produced at 380 m/m 18 micron film, metallization grade @ Amcor Thailand

Enhanced film features

MOPP/MOPE films

- OPTICAL
- PHYSICAL
- MECHANICAL

Higher transparency Lower haze value Enhanced gloss effects

Better film planarity Improved dimensional stability (very low shrinking ratio)

> Better tensile strength Higher load break Linear tear propagation

Packaging structures

Recyclable solutions

- Stand-up pouches
- Sachet
- Packaging reduction, optimization and recycling
- Global Market size 50 Billion € by 2025
- Lighter, less space occupied
- Contains Liquid, solid and semi-solid
- Food, medical and cosmetics

Potato Chips

Recyclable solutions

- Current Packaging Structure
 - Print PET/Met BOPP/extPE/LDPE
 - Print PET/Met PET/LDPE
 - Print PET/MET CPP / CPP
- Packaging Details
 - WVTR Requirement
 - OTR Requirement
- Alternative Structures
 - Print Bopp/MET PP/CPP
 - Print MOPP/MET PP/CPP

- High Demand Segment
- Growing Competition
- Recycling Challenge

Biscuits and cookies

Recyclable solutions

- Current Packaging Structure
 - PET/BOPP/LDPE
 - PET/LDPE
 - BOPP/LDPE
- Packaging Details
 - WVTR Requirement
 - OTR Requirement
- Alternative Structures
 - Print BOPP/CPP
 - Print MOPP/CPP
 - Print MOPE/CPE

- High Demand Segment
- Growing Competition
- Recycling Challenge

Stand-up pouches

Large employment in stand-up-pouches

and Doypack

- Printable
- Retortable (134°C)
- Tearing properties
- Straight and parallel
- No laser scoring or PA tearing

Labelling filmsMOPE Recyclable solutions

MOPE film to be used as replacement for current label in PE Standard PE film thickness:

 -60μ to 90μ

MOPE thickness: 30μ to 45μ

- Gloss effect
- Improved planarity

Lidding filmsMOPE Recyclable solutions

A-PET trays / traditional laminate

- blown PE 60μ (sealing) + BOPET 12μ (reverse printed)

A-PET trays / Mono-material, PE solution laminate

V1: blown PE 60μ (sealing) + MOPE 18μ (reverse printed)

V2 : CPE 50μ (sealing) + MOPE 18μ (reverse printed)

MOPE films to be used with A-PET trays.

Thanks for your attention

Pilot lines range:

No.2 cast film lines 1600 mm and 2600 mm with MDO

No.2 blown film lines 1800 mm and 2600 mm with MDO

No.2 cast stretch film line 1500 mm and 3000 mm
